

**Name:** Clarissa Diamantidis, MD, MHS

**Project Role:** Collaborator

**Affiliation:** Duke University

**City, State:** Durham, North Carolina

**Phone:** 919-668-1261

**Email:** clarissa.j.diamantidis@dm.duke.edu

**Personal Statement:** I am a nephrologist and epidemiologist at Duke University. My research interests involve promoting engagement in kidney disease care by individuals at high-risk for the incidence or progression of chronic kidney disease (CKD), with a focus on engagement by ethnic and racial minorities. Using relatively ubiquitous information technology tools such as websites and mobile health apps, my research goals include improvement of awareness of CKD by those at risk, reduction of adverse patient safety events in CKD such as medication errors, and facilitation of adherence to CKD care.

**Hobbies/Interests:** Travel; crafts

**Why this project is important to me:** CKD outcomes are unacceptably poor, particularly in ethnic and racial minorities. Development of new models of care delivery are vital to improvement in outcomes in individuals at high-risk of adverse CKD outcomes.
